## Expansion Tanks

## TW SERIES EXPANSION TANKS FOR POTABLE WATER HEATING SYSTEMS

Many of today's water systems utilize backflow prevention or pressure reducing valves. This seals off the system and requires the use of an expansion tank, or the relief valve can discharge on each heating cycle.

TW expansion tanks eliminate wating hot water by providing the adequate expansion needed in these systems.

Available in 2 and 5-gallon models they can provide adequate relief for residential tanks up to 120 gallons.
