

Tailored Filtration for Better Water

A. O. Smith PRO filters are specifically designed to effectively and efficiently treat a wide range of water problems, from both city and well sources. These filters are engineered to help conserve water while reducing the wear and tear on systems. You get the quality water you want without all the minerals, odors, tastes, or acidity you don't.

System Features & Benefits:

- **Adjustable cycle sequencing** conserves water and maintains well performance
- **Neutralizes acidic water** that can corrode plumbing systems
- **Turbidex®** reduces particles that can enter into household water
- **Carbon reduces chlorine** taste and smell common with municipal water
- **Metered control** regenerates based on water usage and provides technicians with detailed history and diagnostic information
- **Service alarms** based on time and or gallons to optimize maintenance schedules

ACSmith®

PRO

BACKWASHING & NEUTRALIZING FILTERS

Tailored Filtration for Better Water

Built for flexible performance, this system pairs advanced control with application-specific media to effectively address a wide range of water conditions.

The Vortech® Plate

Vortech Technology creates fluidity of the media bed and extends contaminant reduction capacity — meaning fewer regenerations and a significant reduction in water usage.

The Meter

The meter is designed to measure water usage with extreme accuracy. With its stainless steel shaft and non-corrosive blade material, the meter provides worry-free performance and accounts for high operating efficiencies.

The Medias

Calcite

Neutralizes acidic waters to prevent damage to fixtures and plumbing

Catalytic Carbon

Reduces hydrogen sulfide, chlorine taste & odor, and chloramines for cleaner, better tasting and smelling water

Activated Carbon

Reduces chlorine taste & odor for cleaner, better-tasting water

Turbidex

Reduces turbid particles by both physical and electrostatic adsorption

	Backwashing Filters			Neutralizing Filters	
	APBF-1054	APBF-1252	APBF-1354	APBF-1054-AN	APBF-1354-AN
pH Correction				6.0	5.5
	Filters Water • Various medias available to address specific water conditions			Neutralizes Water • Corrects low pH • Reduces corrosion • Adds beneficial hardness that can be reduced by AP softener if desired
